SILVERLINE BUSINESS SOLUTIONS

SIMULATED INTERNAL CORRESPONDENCE | SLB-001A

Date: October 27, 2026
From: Chief Executive Officer
To: IT Infrastructure Specialist
Subject: Re: Initial IT Infrastructure Assessment

Thank you for reviewing our initial assignment and raising these questions before preparing a purchasing recommendation. Please use the following planning assumptions for this first office.

Printing: We expect light to moderate printing and scanning. For the initial office, plan for one shared multifunction printer. Department-specific printers are not required at launch.

Telephone service: We want a business phone number and a practical way to handle incoming calls. Please compare a hosted VoIP option with alternatives and account for any necessary network equipment or recurring service costs. We have not selected a provider.

Growth: We will begin with eight employees. Plan for approximately twelve employees within the next eighteen months, subject to business performance. We prefer not to replace core equipment immediately when new staff join.

Employee connectivity: Office workstations should have reliable wired connectivity where practical. We also want secure Wi-Fi for company laptops and a separate guest network for visitors. The office layout and available cabling have not yet been confirmed.

Budget: The initial $7,500 capital budget is a firm ceiling for this exercise. Please identify any ongoing subscriptions separately. Do not assume extra funds will be approved; if requirements cannot be met within budget, present alternatives and trade-offs.

Please continue gathering requirements. I can answer questions about business operations, while the IT Director will address technical standards and review your proposed design. No equipment purchases are authorized at this stage.

Regards,
Chief Executive Officer
